

EBSCO Discovery Service

A New Beginning for Research

EBSCO

Fast, simple access to all of the library's full-text content (electronic and print) in a single search box

- Journals
- Newspapers
- Images
- Conference Proceedings
- Books
- Audio
- Magazines
- Monographs
- Video

Your Library Catalog & Institutional Repositories

The background of the slide features a complex, abstract architectural design in shades of blue. It consists of multiple overlapping, semi-transparent rectangular and angular blocks that create a sense of depth and three-dimensional space. The lighting is soft, highlighting the edges and surfaces of these geometric forms. The overall composition is clean and modern, typical of corporate or academic presentation graphics.

Increase Visibility, Reach and Therefore
Value and Usage of the Research Library
Throughout the Organization

“Discovering” content that may
have been missed, and exposing new
users to your resources

If you find what you are looking for faster, you
can move on to analysis or decision making
sooner....

and **tens of thousands**
of others...

The
most relevant
& most valuable
articles should be on the
first page of results..

Superior Relevance Ranking

The system has the following priorities and has
no bias toward content from any provider:

1. **Match on subject headings**
from controlled vocabularies
2. Match on article titles
3. Match on author keywords
4. Match on keywords within abstracts
5. Match on keywords within full text

Exact Matches: Exact matches are favored over partial matches – considering also the field in which those words appear (abstract vs. full text vs. title, etc.)

Density: The number of times the word(s) appears relative to the size of the document (more is better) – considering also the field in which those words appear (abstract vs. full text vs. title, etc.)

Superior Value Ranking

Superior Value Ranking

After conducting an
**unprecedented number
of usability studies**

with scientists, graduate students,
and faculty, the following additional
biases were put in place to improve the
value of the results for the end user:

Superior Value Ranking

Currency:

When relevance is equal,
**the more recent journal
articles rank higher**

Superior Value Ranking

Document Type:

In relation to the search terms,
document types may be relegated
to lower relevance

For example, when the word “book”
or “review” is not searched,

there is a “bias”

against book reviews,
so these don't dominate results

Superior Value Ranking

Length:

Articles of a more substantial length
have a heavier weighting

(e.g., when relevance is equal,

**a ¼ page article is
considered less valuable**
than a 4 page article)

If Purchased via EBSCOhost,
the Following Indexes Are
Automatically
Integrated into EDS
to Complement Full-Text Searching

Full text is used for completeness
and indexing is used for precision

Indexes Automatically Integrated into EDS If Accessing from EBSCOhost

- *Academic Search*
